

PCI Biotech Holding ASA - Third Quarter 2012 Report

Highlights

- Patient inclusion in the ENHANCE study in head & neck cancer patients is on-going. Patient inclusion expected to be completed in 2013.
- Preparation for the Proof of Concept study in bile duct cancer (Cholangiocarcinoma) is progressing according to plan. The clinical study is expected to start by end of 1H 2013.
- The preclinical program to investigate PCI used with vaccines is developing according to plan.

* * *

Operational Review

Progress in development programs

PCI Biotech Holding ASA (PCI Biotech) is an oncology-focused company developing products for localised cancer treatment. The products are based on PCI Biotech's patented drug-delivery technology, photochemical internalization (PCI), which can enhance the effect of anticancer drugs by targeted, light-directed drug delivery into cancer cells.

Amphinex[®] in combination with bleomycin, head & neck cancer

PCI Biotech's lead candidate is the photosensitiser Amphinex used in combination with the generic cytotoxic agent bleomycin. A Phase I/II study of Amphinex in combination with bleomycin in cancer patients, and an extension to this study, have been completed at University College Hospital (UCH) in London. A total of 22 patients were treated in these studies and strong response to treatment was seen in all patients. Amphinex seems to be well tolerated.

Phase II study in head & neck cancer patients – the ENHANCE study

The ENHANCE study is a single arm, multi-centre, phase II study to evaluate the safety and efficacy of Amphinex in combination with the generic cytotoxic agent bleomycin with superficial and interstitial laser light application in patients with recurrent head & neck squamous cell carcinoma unsuitable for surgery and radiotherapy and without distant metastases. The study will include approximately 80 patients with progression free survival at 6 months as the primary endpoint.

Patient inclusion started in May 2012, and the first patient was treated at The National Center for Tumor Diseases (NCT), University Hospital Heidelberg, Germany. Six highly respected cancer institutes in four European countries are currently involved in the study, and further European hospitals are in the process of being involved. The company has explored the possibility to open additional sites in India, but has concluded against this possibility. The patient inclusion is expected to be completed in 2013.

Clinical study in patients with bile duct cancer (Cholangiocarcinoma)

Preparations for a Proof of Concept study for the use of PCI in patients with bile duct cancer is progressing according to plan. In this indication Amphinex will be used in combination with the generic cytotoxic agent gemcitabine.

Surgery is currently the only curative option for these patients, yet the majority of the tumours are inoperable at presentation. Inoperable patients are treated with stenting to keep the bile duct open and with chemotherapy. The combination of gemcitabine and cisplatin has shown promising results and has become standard treatment in some countries, but there is still a need for better treatments to increase overall survival and quality of life. Bile duct cancer is characterised by a remarkable resistance to common chemotherapy, and new drug classes or alternative methods are needed. The most studied and used drug is gemcitabine, which is one of the identified drugs that is significantly enhanced by PCI in preclinical studies. Light access is easy through the endoscopic methods that are routinely used in the treatment of this disease.

The Proof of Concept study is planned to be an open-label, multi-centre Phase I/II study in up to 45 patients to assess the safety and efficacy of Amphinex induced PCI of gemcitabine, followed by systemic cisplatin/gemcitabine in patients with inoperable bile duct cancer. The study will consist of a dose escalation/phase I part to assess the tolerance of local bile duct treatment and a randomized double-arm phase II part. In phase II patients will be randomized to either a control arm (stenting alone followed by gemcitabine/cisplatin chemotherapy) or the PCI arm (stenting followed by Amphinex induced PCI treatment of gemcitabine followed by gemcitabine/cisplatin chemotherapy). The randomisation ratio for this study is 2.5:1 in favor of the PCI arm. The Phase I primary objective will be to determine a tolerable dose for local bile duct treatment with Amphinex induced PCI of gemcitabine, while the Phase II primary objective will be to assess efficacy in terms of progression free survival. Preparations for the study are progressing according to plan and the study is expected to start by end of 1H 2013.

PCI for vaccination

The company has a project ongoing to document that PCI Biotech's photochemical internalization technology (PCI), induces immunological effects in cancer treatment, and to develop a treatment regime for optimal use of these mechanisms.

Preclinical studies have been performed at University Hospital Zürich, Switzerland and at NTNU in Norway. Results from these studies show that under certain conditions, PCI increases the vaccination effect of different antigens. Further preclinical studies are being performed at University Hospital Zurich in 2H 2012 and 1H 2013 to develop and optimise a treatment regime for PCI used with vaccines. The aim is to establish a protocol for a clinical study that can start in 2013.

Presentations of the PCI technology and clinical results

Results from the Phase I/II study of Amphinex in combination with bleomycin in cancer patients at University College Hospital, London, UK (UCH), were presented at the ESMO (European Society for Medical Oncology) 2012 Congress, Vienna, Austria. The presentation was held by Dr Martin Forster (UCH).

The PCI technology with clinical examples was presented at EACMFS (European Association for Cranio-Maxillo-Facial Surgery) 2012 Congress, Dubrovnik, Croatia. The presentation was held by Dr Colin Hopper (UCH).

Financial Review

Results 3rd Quarter 2012

The company received grants from Norway and EU and these are shown as revenues. Revenues in the quarter were NOK 1.6 million compared with NOK 2.2 million in Q3 2011. Revenues in 2011 were affected by NOK 1.1 million from DNB's Innovation price.

R&D costs in Q3 2012 were NOK 9.2 million compared with NOK 4.7 million in Q3 2011. Costs to external partners and hospitals on pre-clinical and clinical trials were higher in the quarter due to inclusion of patients in ENHANCE study and preparations for the Phase I/II study in bile duct cancer.

G&A costs in Q3 2012 were NOK 0.4 million compared with NOK 0.6 million in Q3 2011.

Total operating costs were NOK 9.6 million in Q3 2012, compared with NOK 5.2 million in Q3 2011.

Operating results were NOK -8.1 million in Q3 2012 compared with NOK -3.0 million in Q3 2011.

Net cash flow from operations and net cash flow in the quarter was NOK -7.9 million in Q3 2012, compared with NOK -3.7 million in Q3 2011.

Results YTD 2012

Revenues were NOK 5.4 million YTD 2012 compared with NOK 4.7 million YTD 2011. Total costs were NOK 23.9 million YTD 2012, compared with NOK 16.8 million YTD 2011.

R&D costs YTD 2012 were NOK 22.7 million, compared with NOK 15.1 million YTD 2011. G&A costs YTD 2012 were NOK 1.2 million compared with NOK 1.7 million YTD 2011.

Operating results were NOK -18.6 million YTD 2012 compared with NOK -12.2 million YTD 2011.

Net cash flow from operations and net cash flow was NOK -17.1 million YTD 2012, compared with NOK -12.0 million YTD 2011.

Balance

The company held cash and cash equivalents of NOK 78.0 million at the end of the quarter. Total equity was NOK 76.9 million compared with NOK 92.5 million at the end of 2011. The change in equity reflects the loss in the period.

Outlook

PCI Biotech will continue to focus on the clinical development of Amphinex in combination with cancer drugs for localised cancer treatment, based on the company's unique drug delivery platform.

The main priorities are to effectively develop Amphinex in combination with bleomycin and in combination with gemcitabine. The company will continue to focus on a rapid patient inclusion in the Phase II clinical study in head & neck cancer patients – the ENHANCE study; and to prepare for a clinical study in bile duct cancer.

Another priority is to progress the development of using PCI to enhance the effect of vaccines.

SELECTED EXPLANATORY NOTES:

1. Nature of operation

PCI Biotech Holding ASA (PCI Biotech) was established in 2008, and comprises PCI Biotech Holding ASA, the 100 percent owned subsidiary PCI Biotech AS and the Islandic Branch PCI Biotech Utibu. PCI Biotech AS was a subsidiary of Photocure ASA until June 2008. The company is headquartered at Lysaker, Norway.

PCI Biotech has developed a unique and patented photochemical drug delivery technology for use in cancer therapy and other diseases. The company collaborates closely with The Norwegian Radium Hospital in Oslo, Norway and receives substantial funding on several projects from the Norwegian Research Council, Innovation Norway and the EU. The company has an extensive international collaboration network with recognised drug delivery expert groups. PhotoChemical Internalisation (PCI) is a technology for light-directed drug delivery by triggered endosomal release and was developed to introduce therapeutic molecules in a biologically active form specifically into diseased cells.

The PCI technology has potential to improve the effect both of existing drugs and new classes of drugs, such as gene therapy and other therapies based on nanotechnology or on biotechnological principles. The company's objective is to prove the clinical usefulness of the technology with different drugs and subsequently license out the technology to partners for further development and marketing. Revenues will be generated at the time of partnering and onwards from up-front payments, milestone payments and royalties from licensees. PCI Biotech focuses on the development of technology and products for the delivery of marketed drugs and drugs in development. During the third quarter 2009, the first cancer patients received treatment in a Phase I/II trial with the patented lead candidate Amphinex in combination with the cytotoxic agent bleomycin. The trial was completed at University College Hospital (UCH) in London during Q2 2011. The study has primarily enrolled patients with Head & Neck cancer, a disease with local control issues that the PCI technology could potentially contribute to solve.

The PCI Biotech shares have been listed on the Oslo Axess since 18 June 2008 under the ticker PCIB.

2. Basis of presentation

These Interim Financial Statements should be read in conjunction with the Consolidated Financial Statements for the year ended 31 December 2011 (hereafter 'the Annual Financial Statements'), as they provide an update of previously reported information. They were approved for issue by the Board of Directors on 12 March 2012. The accounting policies used are consistent with those used in the Annual Financial Statements. The presentation of the Interim Financial Statements is consistent with the Annual Financial Statements. The interim report has not been subject to an audit. The board of directors approved the interim condensed financial information on 29 October 2012.

3. Summary of significant accounting policies

The accounting policies applied and the presentation of the interim condensed consolidated financial information is consistent with the consolidated financial statements for the year ended 31 December 2011.

The new standards, interpretations or amendments to published standards that were effective for the annual period beginning on January 1, 2012 and that could affect the PCI Biotech are discussed in accounting policies, part 3, to the consolidated financial statements for 2011. In the 2011 financial statements, PCI Biotech made evaluations that none of these are expected to have significant effect for PCI Biotech.

4. Earnings per share

Earnings per share:

	Q3 2012	Q3 2011	9M 2012	9M 2011	FY 2011
Result allocated to shareholders (in NOK '000)	(7 623)	(2 239)	(16 895)	(9 733)	(13 749)
Weighted average of outstanding shares (in '000)	7 666	7 666	7 666	7 666	7 666
Earnings per share (NOK per share)	-0,99	-0,29	-2,20	-1,27	-1,79

Diluted earnings per share:

	Q3 2012	Q3 2011	9M 2012	9M 2011	FY 2011
Result allocated to shareholders (in NOK '000)	(7 623)	(2 239)	(16 895)	(9 733)	(13 749)
Weighted average of outstanding shares (in '000)	8 524	8 389	8 506	8 389	8 389
Earnings per share (NOK per share)	-0,99	-0,29	-2,20	-1,27	-1,79

Weighted average of outstanding diluted shares is weighted number of average shares adjusted with share options. Earning per share is not affected by the dilution if negative results in the period.

5. Segment information

The company reports only one segment.

The Company's revenues are not influenced by any cyclicity of operations.

6. Related party transactions

PCI Biotech is relying on services provided by third parties, included related parties, as a result of its organisational set-up. PCI Biotech considers that its business relationship with Radiumhospitalets Forskningsstiftelse and legal services provided by Board member Theresa Comiskey Olsen represents related party transactions. The following table shows the extent of such transactions in the reported periods (all figures in NOK '000):

Purchase of services	Q3 2012	Q3 2011	9M 2012	9M 2011	FY 2011
Radiumhospitalets Forskningsstiftelse	780	440	1 169	1 477	1 947
Theresa Comiskey Olsen	-	21	3	75	92

At the end of the quarter, PCI Biotech had NOK 758,000 in short term debt to Radiumhospitalets Forskningsstiftelse and no short term debt to Theresa Comiskey Olsen.

7. Credit risk, foreign currency risk and interest risk

Credit risk

PCI Biotech trades only with recognised, creditworthy third parties, of which most are governmental institutions. Receivable balances are monitored on an ongoing basis with the result that the company's exposure to bad debts is not significant and therefore no offset of bad debts has been recognised at the end of the quarter.

Maturity profile on receivables as per 30 September:

	Not due	Less than 3 months	3 to 12 months	Total
Trade receivables	5			5
Other receivables	6 138	-	-	6 138
Total receivables	6 143	-	-	6 143

Foreign currency risk

PCI Biotech has transactional currency exposure arising from sales and purchases in currencies other than the functional currency (NOK). PCI Biotech has not implemented any hedging strategy to reduce currency risk.

Interest risk

PCI Biotech has no interest bearing debt. At end of the quarter, NOK 50 million of the cash was placed at accounts with fixed interest. The fixed interest matures in Q4 2012 and Q1 2013.

8. Tangible assets

Changes in value:

	Third quarter		1.1 - 30.09	
	2012	2011	2012	2011
Carrying value at the beginning of the period	-	44	17	78
Additions				
Depreciation in the period	-	-15	-17	-49
Carrying value at the end of the period	-	29	-	29

9. Deferred tax and deferred tax assets

At the end of the quarter, the company held NOK 38.0 million in non-capitalised deferred tax assets.

10. Share options

In Q1 2012, a total of 135,000 share options were granted to six employees with an exercise price of NOK 37.02 per share, equal to the average price of the 5 latest days prior to allocation.

The fair value of options granted in Q1 2012 determined using the Black-Sholes valuation model was NOK 3,128,000. The significant inputs into the model were a share price of NOK 37.02 at the grant date, volatility of 100%, dividend yield 0%, an expected option life of three years and an annual risk free rate of 2.16%.

Costs related to the share options were NOK 0.4 million in Q3 2012 and NOK 1.2 million in 9M 2012.

Share options outstanding at the end of the period have the following expiry date and exercise prices:

Expiry date	Exercise price	Number of shares	
	in NOK per share	30.09.2012	30.09.2011
2013 - Q4	19.02	255 000	255 000
2014 - Q4	6.47	234 000	234 000
2015 - Q4	37.24	115 000	115 000
2017 - Q4	37.02	135 000	
Total		739 000	604 000

11. Material events subsequent to the end of the reporting period

To the best of PCI Biotech's knowledge, there have been no events subsequent to the end of the reported interim period that would influence the financial statements included in this report.
